

DC10: Compartment division and replicator evolution

Supervisor: Prof. Sijbren Otto, s.otto@rug.nl

Host institution: University of Groningen (RUG), Stratingh Institute for Chemistry – Centre for Systems Chemistry, Groningen, Netherlands

The University of Groningen, established in 1614, has brought forward exceptional academics, like the first female student and the first Dutch astronaut. It ranks 'Top 100' in the ARWU Shanghai Ranking and the The World University Rankings. It has an excellent Chemistry Department (for example, Nobel Prize for

Prof. Feringa in 2016). The research group of Sijbren Otto is world leading in Systems Chemistry, with a special emphasis on self-replicating systems, and pioneering in the area of the de-novo synthesis of life.

Project description: The project aims to develop methodology that enables compartment growth, division. It utilizes the self-replicating molecules developed by RUG that can catalyse the formation of molecules that assemble into coacervate droplets. Replicators partition into these droplets, where they continue to replicate and catalyse compartment growth. Methods will now be developed to induce compartment division. Specifically, DC10 will: (1) Develop methods for autonomous compartment division based on chemical fueling; (2) Develop (in collaboration with ESPCI) a microfluidics methodology that allows manipulaton of coacervate droplets. (3) Expand setup with channels that provide precursors to allow in situ compartment and replicator growth. (4) Develop a computational model for the coacervate-replicator system (with PARM).

Secondments: This project is carried out in strong collaboration with the following groups, and visits to their laboratories are expected during the project. A willingness to travel and spend time abroad is therefore essential:

- Host: École Supérieure de Physique et de Chimie Industrielles de la Ville de Paris (ESPCI)/ ELVESYS (ELV) | Length: 3 months | Purpose: Develop methodology for microfluidic-based compartment division.
- Host: Parmenides Foundation (PARM) | Length: 2 months | Purpose: Develop computational model for multilevel selection of compartmentalised replicators.
- Host: Dewpoint Therapeutics (DEW) | Length: 2 months | Purpose: Exploring industrial applications of condensate biology.

Eligibility conditions:

• An internationally recognised MSc degree in chemistry, or a related field.

Required Skills:

• Applicants whose first language is not English must submit evidence of competency in English, please see <u>University of Groningen's English Language Requirements</u> for details.

Monthly allowances:

- Living allowance: €3400*
- Mobility allowance: €600
- Family allowance, if applicable: €660

Estimated gross salary: ~38,600 €/year (first year) to ~49,500 €/year (final year)

* The living allowance is adjusted by a <u>country correction coefficient</u>, depending on the country where the host institution is located. The exact net salary is dependent on local tax and social and health insurance regulations and will be confirmed upon appointment.

Enquiries

For general information about the DarChemDN visit the project website or send an email to info@darchem-dn.eu.

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Research Executive Agency. Neither the European Union nor the granting authority can be held responsible for them. (Grant Agreement No. 101119956)

How to apply

To complete your online application, visit the <u>DarChemDN recruitment web page</u>.

Required documents:

- Cover Letter
- Curriculum Vitae (including contact information of two referees)
- Copy of Transcripts
- Copy of Diplomas (if available at the time of application otherwise please provide a confirmation with the expected graduation date)

Only shortlisted applicants will be contacted. Interviews are expected to be online in November/December 2023.

Application deadline: To receive full consideration, applications must be submitted before **31 October 2023**.
